

Paulo Henrique Inocencio

Android Developer

I am a software developer with over 14 years of experience, approximately 10 years of which have been focused on native application development, primarily for Android, but also with experience in iOS.

My primary programming language is Kotlin. I have been working on projects using Kotlin for over 5 years. I migrated from Java to Kotlin when Google officially endorsed it as the recommended language for Android development.

As an Android developer, I have worked with various architectures, including MVC, MVP, and MVVM. I have used several libraries, such as Dagger, Hilt, and Koin for dependency injection; Retrofit and Ktor for RESTful requests; SQLite, Room, and SqlDelight for data persistence; Java Threads, RxJava, and Coroutines for asynchronous programming; LiveData and Kotlin Flows for state management. I also have experience with XML, Jetpack Compose, and Compose Multiplatform for layout creation; JUnit 4, Kotlin-test, Kotlinx-coroutines-test for unit testing; and Mockito and Mockk for integration testing.

I have worked on various projects, both individually and in teams consisting of other Android developers, as well as in multidisciplinary teams involving iOS, React Native, and C++.

I'm currently deepening my knowledge of Kotlin Multiplatform through personal projects and by applying it whenever possible at work.

| WORK EXPERIENCE

Ambush (Aug 2024 - Present)

■ Senior Android Developer

■ Project: Global Leading Payment Platform

I was allocated to work on the Android native team of a global leading payments platform that's used by millions of consumers and merchants around the globe. My responsibilities include designing and delivering reliable code to the company's SDK components and integrating new features from the company's SDK into a Test App, enabling the QA team to conduct end-to-end testing more efficiently.

Each company's SDK follows distinct architectures and design patterns, utilizing a mix of

technologies tailored to the preferences and needs of the respective teams. However, the most prominent technologies include XML + Views for the user interface, MVVM as the primary design pattern, and Kotlin as the main programming language.

Zoop - Financial Services (May 2023 - Jul 2024)

■ Senior Android Developer

■ Project: Tap to Pay - Nubank

Tap To Pay is a product of Nubank, the largest digital bank in Latin America, which allows cell phones with NFC (Near Field Communication) to function as a POS Terminal (Point of Sale), all thanks to SDKs developed by Zoop.

Among my responsibilities were technical leadership, training new project members, code reviews, documentation, technical consultancy with the client during the design of new features, being the technical bridge between Nubank and other international partners (MyPinpad and Apple), publishing and maintaining new versions of SDKs.

I worked mainly with Android using Kotlin + XML + EventBus-Based architecture on the SDK side + HttpURLConnection for networking + MVVM with LiveData on the app side + JUnit for unit testing.

■ Project: Zoop Checkout

Zoop Checkout is an integrated management system and a complete point of sale. The app connects with POS terminals via Bluetooth.

Among my responsibilities were technical consultancy specialized in Android; Code Reviews; and Migration of existing screens to Kotlin Multiplatform.

I worked mainly with Android, Windows, and MacOS using Kotlin + Jetpack Compose Multiplatform + MVVM with Flows + Ktor for networking + Koin for dependency injection + SqlDelight for persistence + Mock and Robolectric for the Integration and UI testing.

Invillia (Oct 2018 - May 2023)

■ Senior Android Developer

■ Project: Credline Digital

Credline Digital is a credit initiation system for accredited establishments. The retailer consults and collects customer information in the application to grant them credit.

Among my responsibilities were technical leadership, training new project members, code Reviews, technology migration, refactoring, and maintenance of all app screens; technical

consultancy with the client during designing new features, publishing, and maintaining new app versions.

I worked mainly with Android using Kotlin + XML with ViewBinding and Jetpack Compose + Clean architecture with MVP and MVVM + Dagger and Hilt + RxJava and Coroutines for concurrency + Kotlin Flows for state handling + Retrofit for networking + Room for persistence + JUnit, Kotlinx-coroutines-test for integration testing.

■ **Project:** Cartão Mais!

The Cartão Mais (or Plus Card) is a credit card provided by Credsystem. The app allows you to pay bills, check invoices and transactions, and receive offers from partner stores.

Among my responsibilities were the maintenance of the UI and behaviors of the payment, bill reading, and biometrics screens; Code review, technical consultancy with the client during the design of new features, publishing, and maintaining new versions.

I worked mainly with Android using Kotlin + XML + MVP + Dagger + Threads and AsyncTask for concurrency + Retrofit for networking + JUnit for unit testing.

Zeon Solutions - Software Development LTDA - EPP (Jul 2017 - Oct 2018)

■ **Mid Android Developer**

■ **Project:** Nadire - B4 Secure Solutions

Nadire is an application for recording claims in the residential, commercial, industrial, and condominium sectors.

Among my responsibilities were the design and implementation of the architecture and all app screens - forms, images, and audio collection; publishing and maintaining new versions.

I worked mainly with Android using Kotlin and Java + XML + MVC + Threads and AsyncTask for concurrency + JUnit for unit testing + HttpURLConnection for networking + SQLite for persistence.

■ **Project:** e-Dentist.

e-Dentist is a system for managing dental clinics. With the application, it is possible to make appointments and check patient records.

Among my responsibilities were the maintenance of the UI and behaviors of the scheduling screen. Publishing and maintaining new versions.

I worked mainly with iOS using Swift + Storyboard and View Code

Mstech - Education and Technology EIRELI (Feb 2012 - May 2017)

■ Junior Mobile Developer

■ Project: Approxima

Approxima is an application for integration between Parents/Guardians and Educational Institutions. With the App, it is possible to obtain school information from students, such as bulletins and calendars of events.

Among my responsibilities were the implementation and maintenance of the UI and behaviors of the Home, student listing and selection, bulletin, and calendar screens.

I worked mainly with Android using Java + XML + MVC + Threads and AsyncTask for concurrency + JUnit for unit testing + HttpURLConnection for networking + SQLite for persistence.

■ Project: Solidativa

Solidativa is a sharing environment focused on volunteering. Through the application, institutions register their events and needs. When needed, they recruit registered volunteers according to their preferences and skills.

Among my responsibilities were the implementation and maintenance of the UI and behavior of the list of institutions, registering, searching for volunteers, and user details screens.

I worked mainly with iOS using Swift + View Code.

■ Junior Flash Developer

■ Project: Educopédia

Educopédia is a collaborative online platform for digital classes, where students and teachers can access self-explanatory activities in a fun and practical way.

Among my responsibilities were the design and development of mechanics, levels, and scoring systems for several educational mini-games.

I worked mainly with Adobe Flash using Action Script 3.0.

| SOFT SKILLS

Communication	Conducting meetings with partners, clients, and team, to clarify technical doubts and blockages. Status reports on projects and tasks for leadership. Specialized technical consultancy for managers and product owners.
---------------	--

Leadership	Performance evaluation of team members. Project overview and technical onboarding for new team members. Prioritization and distribution of demands to the team. Conducting technical interviews. Intermediation of technical conflicts between developers.
Self-learning	I learn quickly and independently. One example was English, which I learned on my own through reading and listening. I studied Swift and iOS on my own, intending to be able to migrate to the Mobile development area. I learned Android on my own, and today I continue studying Kotlin Multiplatform through books and tutorials, as I believe that the technology can open up new possibilities for cross-platform development.
Adaptability	During my career, I had to adapt to changes in projects, leadership, teams, technologies, and work methodologies.
Owner's view	I care about the usability and stability of the projects I'm involved in. I try to understand what the user's biggest pain is and how our product can solve that pain. I also try to analyze competitors to design and implement competitive features.
Work under pressure	I had to learn to develop emotional intelligence and resilience to deliver well even with projects without a clear scope, conflicting demands, tight deadlines, and team members out of sync.

| HARD SKILLS

Operating systems	Android (Kotlin/Java), iOS (Swift/Objective-C), MacOS (KMM - Kotlin Multiplatform)
Programming Languages	Kotlin, Java, Swift, Objective-C, Go, JavaScript.
Architectures	MVC, MVVM, MVI, MVP, MVC-Coordinators, Clean Architecture with Multi Modules.
Programming/Tools	Android Studio, Xcode, IntelliJ, Git, Postman.

Libraries	RxJava, Coroutines, Dagger 2, Dagger Hilt, Koin, Retrofit, Volley, Ktor, CameraX, Android Architecture Components, Jetpack Compose, Compose Multiplatform, JUnit, Kotlin-test, Mockito, Mockk. RxSwift, Alamofire, UIKit, SwiftUI, XCTest, XCUITest, Cocoapods, Firebase Crashlytics.
Hardware	Bluetooth, NFC, Camera.
Databases	Room, SQLDelight, SQLite, Core Data, Realm, Postgress
Cloud	Bitbucket, Digital Ocean, Heroku, Jenkins, GitLab, Firebase Storage, AWS.
CI/CD	GitHub Actions, Fastlane, Jenkins, App Center.
Agile Methodologies	Scrum, Kanban

| EDUCATION

Industrial College Prof. Isaac Portal Roldan (2009 - 2011)

Computer Technician

| LANGUAGES

Portuguese (Native)

English (Professional Proficiency)
